III. Cấu hình

- Cấu hình cổng Lan cho pfsense:

```
Enter an option: 2

Available interfaces:

1 - WAN (em0 - dhcp, dhcp6)
2 - LAN (em1 - static, dhcp6)

Enter the number of the interface you wish to configure: 2

Configure IPv4 address LAN interface via DHCP? (y/n) n

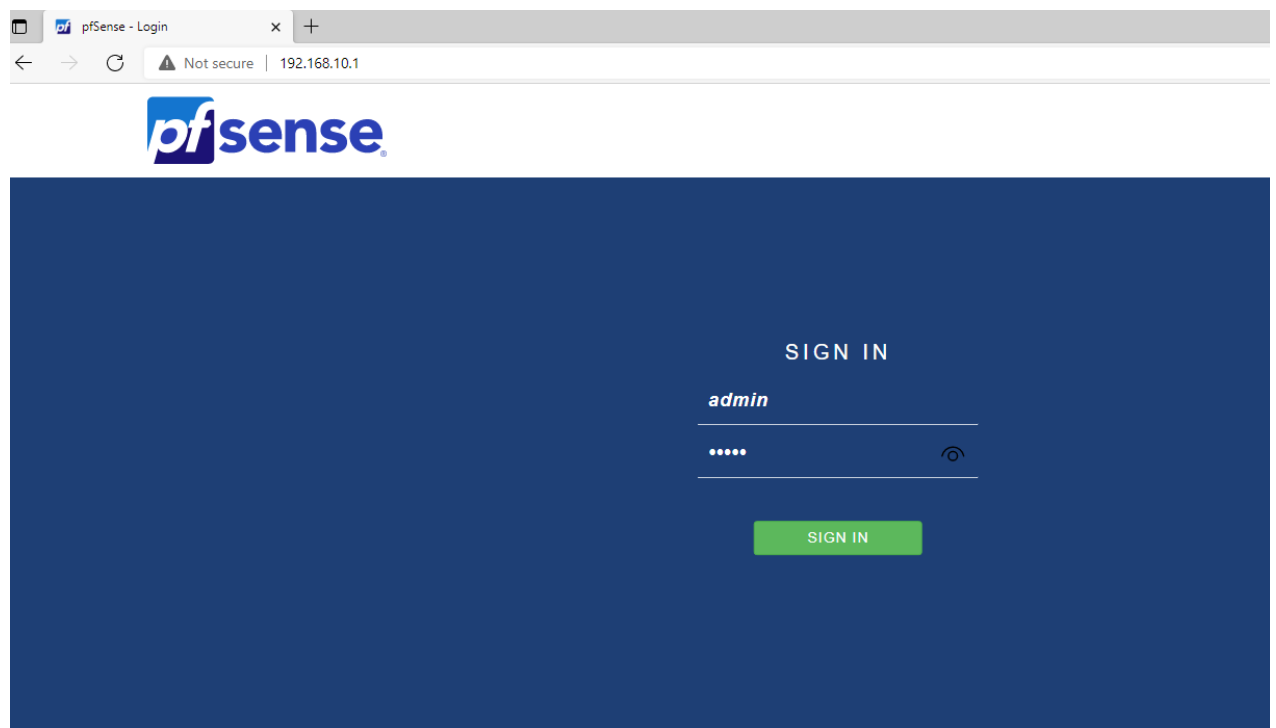

Enter the new LAN IPv4 address. Press <ENTER> for none:
> 192.168.10.1

Subnet masks are entered as bit counts (as in CIDR notation) in pfSense.
e.g. 255.255.255.0 = 24
     255.255.0.0   = 16
     255.0.0.0     = 8

Enter the new LAN IPv4 subnet bit count (1 to 32):
> 24
```

- Cấu hình web cho pfsense

Đăng nhập vào web với username/password là admin/pfsense

Cấu hình hostname, domain, dns

General Information

On this screen the general pfSense parameters will be set.

Hostname

pfSense

Name of the firewall host, without domain part.

Examples: pfsense, firewall, edgefw

Domain

pfsense.com

Domain name for the firewall.

Examples: home.arpa, example.com

Do not end the domain name with '.local' as the final part (Top Level Domain, TLD). The 'local' TLD is widely used by Apple (i.e. AirPrint, AirPlay) and some Windows systems and networked devices. These will not network correctly. Alternatives such as 'home.arpa', 'local.lan', or 'mylocal' are safe.

The default behavior of the DNS Resolver will ignore manually configured DNS servers for client queries and manually configured DNS servers below for client queries, visit Services > DNS Resolver and enable DNS Query

Primary DNS Server

8.8.8.8

Secondary DNS Server

8.8.4.4

Override DNS

☒

Allow DNS servers to be overridden by DHCP/PPP on WAN

DescriptionDMZ

Enter a description (name) for the interface here.

IPv4 Configuration TypeStatic IPv4

IPv6 Configuration TypeNone

MAC Addressxxxxxxxxxxxx

This field can be used to modify ("spoof") the MAC address of this interface.
Enter a MAC address in the following format: xx:xx:xx:xx:xx:xx or leave blank.

MTU

If this field is blank, the adapter's default MTU will be used. This is typically 1500 bytes but can vary in some circumstances.

MSS

If a value is entered in this field, then MSS clamping for TCP connections to the value entered above minus 40 for IPv4 (TCP/IPv4 header size) and minus 60 for IPv6 (TCP/IPv6 header size) will be in effect.

Speed and DuplexDefault (no preference, typically autoselect)

Explicitly set speed and duplex mode for this interface.
WARNING: MUST be set to autoselect (automatically negotiate speed) unless the port this interface connects to has its speed and duplex forced.

Static IPv4 Configuration

IPv4 Address11.0.0.1

/24

IPv4 Upstream gatewayNone

Add a new gateway

If this interface is an Internet connection, select an existing Gateway from the list or add a new one using the "Add" button.
On local area network interfaces the upstream gateway should be "none".

Cấu hình IP tĩnh cho DMZ

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address: 11 . 0 . 0 . 2

Subnet mask: 255 . 0 . 0 . 0

Default gateway: 11 . 0 . 0 . 1

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server: 8 . 8 . 8 . 8

Alternate DNS server: 8 . 8 . 4 . 4

☐ Validate settings upon exit

WAN

The interface where OpenVPN will listen for incoming connections (typically WAN.)

Local Port

1194

Local port upon which OpenVPN will listen for connections. The default port is 1194. This used.

Tunnel Settings

IPv4 Tunnel Network

192.168.20.0/24

This is the IPv4 virtual network or network type alias with a single entry used for private or expressed using CIDR notation (e.g. 10.0.8.0/24). The first usable address in the network usable addresses will be assigned to connecting clients.

A tunnel network of /30 or smaller puts OpenVPN into a special peer-to-peer mode which with several options, including Exit Notify, and Inactive.

IPv6 Tunnel Network

This is the IPv6 virtual network or network type alias with a single entry used for private or expressed using CIDR notation (e.g. fe80::/64). The ::1 address in the network will be assigned to connecting clients.

Redirect IPv4 Gateway

☐ Force all client-generated IPv4 traffic through the tunnel.

Redirect IPv6 Gateway

☐ Force all client-generated IPv6 traffic through the tunnel.

IPv4 Local network(s)

192.168.10.0/24

IPv4 networks that will be accessible from the remote endpoint. Expressed as a comma-separated type aliases. This may be left blank if not adding a route to the local network through this

Firewall Rule Configuration

OpenVPN Remote Access Server Firewall Rules

Rules control passing or blocking network traffic as it flows through the firewall.

Rules must be added which allow traffic to reach the OpenVPN OpenVPN tunnel.

The options on this step can add automatic rules to pass this traffic.

Traffic from clients to server

Firewall Rule

☒ Add a rule to permit connections to this OpenVPN server in

Traffic from clients through VPN

OpenVPN rule

☒ Add a rule to allow all traffic from connected clients to pass

Vào OpenVPN > Client Export tải phiên bản phù hợp

The screenshot shows the 'OpenVPN Clients' interface. It has three main columns: 'User', 'Certificate Name', and 'Export'. The 'User' column lists 'Authentication Only (No Cert)'. The 'Certificate Name' column shows 'none'. The 'Export' column contains a list of configuration options with corresponding download icons:

- Inline Configurations:
 - Most Clients
 - Android
 - OpenVPN Connect (iOS/Android)
- Bundled Configurations:
 - Archive
 - Config File Only
- Current Windows Installer (2.6.5-1x001):
 - 64-bit
 - 32-bit
- Previous Windows Installer (2.5.9-1x601):
 - 64-bit
 - 32-bit
- Legacy Windows Installers (2.4.12-1x601):
 - 10/2016/2019
 - 7/8/8.1/2012r2
- Viscosity (Mac OS X and Windows):
 - Viscosity Bundle
 - Viscosity Inline Config

Below the list, a note states: 'Only OpenVPN-compatible user certificates are shown'.

Cài đặt trên máy thật và tiến hành kết nối vpn

The screenshot shows the 'OpenVPN Connection (pfSense-TCP-1194-config)' window. The 'Current State' is 'Connecting'. The log area displays the following information:

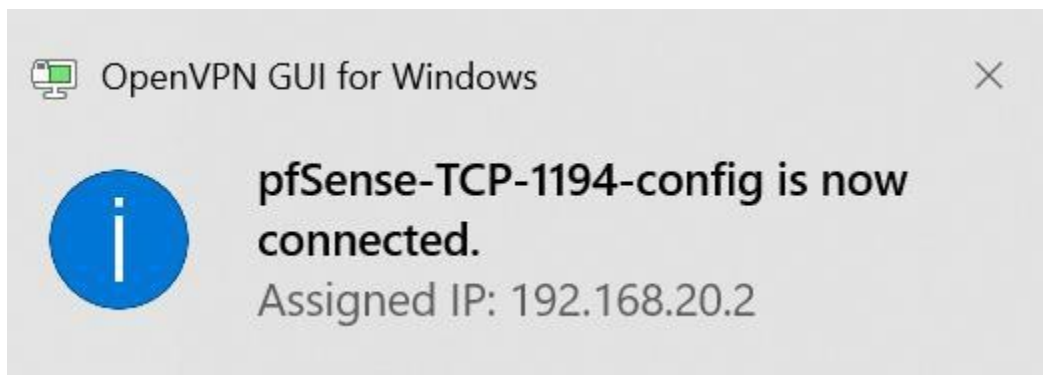

- Fri Oct 20 17:43:49 2023 OpenVPN 2.6.5 [git:v2.6.5/cbc9e0ce412e7b42] Windows-MSVC [SSL (OpenSSL)] [LZO
- Fri Oct 20 17:43:49 2023 Windows version 10.0 (Windows 10 or greater), amd64 executable
- Fri Oct 20 17:43:49 2023 library versions: OpenSSL 3.1.1 30 Mar 2023 LZO 2.10
- Fri Oct 20 17:43:49 2023

A login dialog box titled 'pfSense-TCP-1194-config' is overlaid on the window. It contains the following fields and controls:

- Username: [text input field]
- Password: [password input field] [toggle icon]
- ☐ Save password
- OK button
- Cancel button

At the bottom of the window, there are three buttons: 'Disconnect', 'Reconnect', and 'Hide'. The version 'OpenVPN GUI 11.43.0.0/2.6.5' is displayed in the bottom right corner.
